

Sustainable Materials and Technologies: Biochar, Lignin, and Full-depth Reclamation

Goal: To evaluate sustainable materials and technologies for pavement rehabilitation, with a focus on incorporating biochar and lignin into Full-Depth Reclamation (FDR) mixtures so as to improve pavement sustainability and long-term performance (*2 CEE Clinic Students*)

Advisors: Dr. Yusuf Mehta and Dr. Ahmed Saidi

Over the next semester, we will:

- Review existing literature on biochar, lignin, and FDR
- Prepare FDR mixtures with biochar and lignin in the lab
- Conduct performance testing to evaluate FDR mechanical performance and sustainability benefits
