

Sustainable Facilities Center Engineering Clinic Projects

Sustainable Facilities Center (SFC)

- Since 2018, the SFC has performed projects for New Jersey Department of Military Affairs (**NJDMAVA**) and others.
- Provides funding for **graduate student positions**.
- Provides opportunities for **summer internships!**
- Gain access to SFC space (Rowan Hall Room 222) for studying.
- Check out our website [here!](#)

Fall 2026 Clinic Projects

- Energy and Water Efficiency Improvements for NJ DMA Buildings
–CEE, ME and ECE groups (**NJDMA**)
- Building Information Modeling (**NJDMA**)
- Environmental Impact of Data Centers (**internal**)

Energy and Water Efficiency Improvements for NJ DMA Buildings

Clinic Advisors: Dr. Riddell, Dr. Trias, Dr. Haas, and Dr. Li

Clinic Description: Analyze building water and energy use, perform site visits to collect information, create models of energy use, and perform preliminary designs for measures to improve efficiency or generate renewable energy on site.

Clinic Requirements:

- 3-4 students from each of ME, CEE, and ECE
- Students should register for section under own discipline, i.e., Riddell for CEE, Li for ECE, Haas for ME
- Attend off-campus visits to NJDMAVA sites.
- Use field equipment (thermal cameras, flow bags, etc.) to collect building data.
- We would prefer a two-semester commitment.

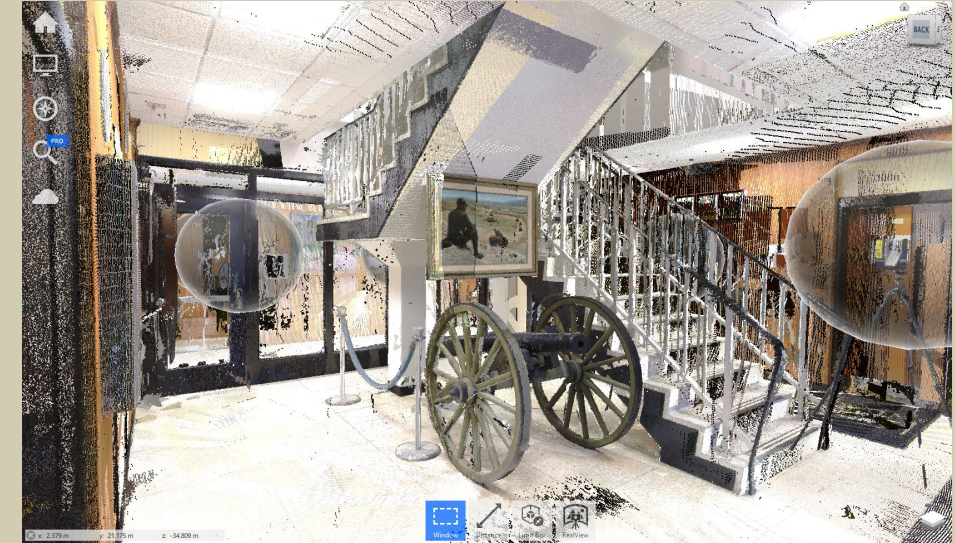

Building Information Modeling

Clinic Advisors: Dr. Trias and Dr. Riddell

Clinic Description: This project is a collaborative process of collecting and organizing detailed building data to create a 3D digital model that integrates design, construction, and operational information for improved decision-making and project management for NJDMAVA. Learn how to harness the power of BIM for facility management.

Clinic Requirements:

- Seeking 5 students—ME, CEE, and ECE majors are welcome.
- Looking for a two-semester commitment—there is some ramp up time for learning the software.
- Learn Autodesk ReCap, Revit, AutoCAD, and Insight.

New for
Fall 2026

Environmental Impact of Data Centers

Clinic Advisors: Dr. Riddell, Dr. Trias, Dr. Zhang (CEE); Dr. Li, Dr. Peters (ECE)

Clinic Description: Generative AI is becoming more prevalent in both academia and industry. However, there are concerns about the environmental effects of data centers. Fear of climate change, energy costs, water use and noise have led some states, e.g., New York, to implement or consider moratoriums on new data centers, despite potential economic benefits. The goal of this clinic is to quantify these concerns so that we can be informed citizens and contribute to the conversation.

Clinic Requirements:

- 2-4 students of any major

We are excited to have you if interested!
